

## Fujitsu FLASHWAVE® 4500 BITS Streaker/Test Board STB-FUJ4500BITS Practice

The STB-FUJ4500BITS provides a quick method to verify continuity as well as, transmit a test signal from the FLASHWAVE 4500 BITS card slots to the DSX-1. At the DSX-1, Tester 2 will use a continuity test probe to verify that the BITS card slot is properly wired. Tester 2 is also capable of looping a test signal back to the STB-FUJ4500BITS and Tester 1 can determine if the signal is acceptable for system turnup. The STB-4500BITS is used on non-powered systems.

## Fujitsu FLASHWAVE® 4500 BITS Streaker/Test Board STB-FUJ4500BITS Practice

### ► Step by Step Procedure

### TESTER 1 (Fujitsu FLASHWAVE 4500 BITS Continuity Test)

- 1a. Press LED test button. Verify that all LED's illuminate. If LED's do not illuminate, replace with a new battery.
- 2a. Select BITS card slot TCA2 (P) or (W) to begin testing.  
**(CAUTION: Do not force. Verify proper alignment before inserting.)**
- 3a. If chassis ground is not already connected through the backplane, insert Pin plug test cord (# 400409) into the STB-FUJ4500BITS Card and connect the Alligator Clip to Frame Ground.
- 4a. Establish communication with Tester 2 at the DSX-1. You are ready to begin testing at the Fujitsu FLASHWAVE 4500 (observe LED's illuminating).

### TESTER 2 (DSX-1)

- 1b. Connect test probe (P-2000) Alligator Clip to Frame Ground.
- 2b. Plug Bantam to Alligator Clips cord in DSX-1 jack to begin testing
- 3b. Touch Probe end to "ground the corresponding wiring assignments." The LED on the probe will illuminate to indicate a connection to the STB-FUJ4500BITS Card.

**LED (Primary Input Tip) = DSX-1 (Primary Input Tip)**

### ► Step by Step Procedure

### Primary and Secondary BITS Test Acceptance Procedure:

1. Select BITS card slot TCA2 (P) or (W) to begin testing.  
**(CAUTION: Do not force. Verify proper alignment before inserting.)**
2. Using a T1 Test Set, connect bantam cords (400210RD)-Transmit (Tx) and (400210BK)-Receive (Rx) to the appropriate jacks from the STB-FUJ4500BITS to a T1 test set to perform acceptance testing.
3. Establish communication with Tester 2 at the DSX-1. Determine which circuits you will be testing. Tester 2 will loop the test signal back to Tester 1 with a bantam looping plug/cord (400210LP).
4. Tester 1 will verify that the signal transmitted is acceptable for qualification purposes.
