

Fujitsu FLASHWAVE® 4300 DS3 Test Board TB-FUJ4300DS3 Practice

The TB-FUJ4300DS3 provides a quick method to transmit an acceptable test signal from the FLASHWAVE 4300 DS3 card slots to the DSX-3. At the DSX-3, Tester 2 will loop the signal back to the TB-FUJ4300DS3 and determine if the signal is acceptable for system turnup. The wiring label indicates Transmit (Tx) and Receive (Rx) 440A jacks for the 3 DS3 circuits. The TB-FUJ4500DS3 is used on non-powered systems.

Fujitsu FLASHWAVE® 4300 DS3 Test Board TB-FUJ4300DS3 Practice

► Physical Description / Wiring

Fujitsu FLASHWAVE* 4300 Shelf

 *The (TB-FUJ4300DS3) FLASHWAVE 4300 DS3 Test Board will plug into slots (3-8) & (10-15) color coded red.

Fujitsu FLASHWAVE® 4300 DS3 Test Board TB-FUJ4300DS3 Practice

▶ Step by Step Procedure

Test Acceptance Procedure:

1. Select DS3 card slot (3-8) or (10-15) to begin testing.
(CAUTION: Do not force. Verify proper alignment before inserting.)
2. Using a DS3 Test Set, connect 440A DS3 cords (400440ARD) -Transmit (Tx) and (400440ABK) -Receive (Rx) to the appropriate jacks from the TB-FUJ4300DS3 to the DS3 test set to perform an acceptance test.
3. Establish communication with Tester 2 at the DSX-3. Determine which circuits you will be testing. Tester 2 will loop the test signal back to Tester 1 with a DS3 looping plug/cord (400440DLP).
4. Tester 1 will verify that the signal transmitted is acceptable for qualification purposes.
